Notice of Termination of Controller Production

Dear Customer,

Thank you for using TOSHIBA MACHINE die casting equipment. We always appreciate your support.

Of the controllers, SEMU, SMU, LDMU, LMU and DMU, including their peripheral devices, a long time has passed since the design and the start of the production, and now some of the parts being used for them are not available due to their termination of manufacture.

As the number of the parts in our stock for production is also limited, we have no choice but to terminate the production of those controllers. Furthermore, even for repair, we are experiencing difficulty of obtaining the parts or, to our regret, required to wait for a long time.

Therefore, we ask that you kindly understand and accept our notice of termination together with the following as the renewal of those controllers, and hope that you honor us with them.

1. Controllers to be ceased in production

Controller to cease	Controller to renew
All models of SEMU	SEMUR (provisional name)/TOSCAST
All models of SMU	CASTOUCH
All models of LDMU	LDMU-A (provisional name)/TOSCAST
All models of LMU	LMU-A (provisional name)/TOSCAST
All models of DMU	TC200

*Note 1: The renewal controllers cannot be substituted with the machine intact, but require some hardware change.

2. Date of termination: At sight

3. Reason of termination: The electronic parts used for the products cease to be in production.

4. Period of repair service availability: The repair services are to be available for seven years from now, which means until the end of August 2014.

5. Renewal service availability: From August 2007

We ask that your inquiries concerning the controller renewal be addressed to our sales personnel or to your local service dealer.

Sincerely,

Yoichi Kinoshita
Senior Manager
